The graph illustrates the relationship between the DALI Dimming Level and the Output Current (%). The main graph shows a curve that starts at 0% current for DALI level 1 and rises to 100% current at DALI level 254. An inset graph provides a detailed view of the curve for DALI levels 1 to 50, showing that the output current increases from approximately 0.05% to 0.4%.

1. Press the Touch DIM (Push DIM) switch for 8s or more, the driver can be controlled via Push DIM switch.
2. Short press the Touch DIM (Push DIM) switch (<0.5s) to control the lamp on or off.
3. Long press the Touch DIM (Push DIM) switch (>0.5s) to dim the brightness of light. The dimming direction will change every time after pressing switch.
4. Double-click the Touch DIM (Push DIM) switch (<0.3s), then all lamps connected on the device will be set maximum brightness.
5. The brightness adjustment range is 1%-100%, and the light can be turned off through short pressing when doing the adjustment with long pressing Push DIM switch.
6. With the Power off memory function, the power-down state will be recovered when power on again.
